<< MEAL HEATING INSTRUCTIONS >>

You can eat the food cold but we recommend hot for maximum enjoyment. Place meal pouch in boiling water for about 6 minutes. Lift the meal pouch out of the water then pull open the bottom gusset so the pouch can stand.

Alternative ways of heating the pouch is to leave the retort meal in the direct sun for 20 minutes or keep the pouch close to your body during activity. Tear the top of the pouch open at the indent mark provided. Eat & enjoy.
